# Ebuy Finance

**EBUY project is an application for all online buying and selling without intermediaries**

### **What is Ebuy Finance all about?**

Our mission is to create an application with a new platform that is highly efficient and powerful. Our platform will be powered by our utility-token EBUY. Users of our platform will be able to use our token to buy or sell everything. We are trying to become the easiest solution for everyone. First, we are releasing a web version and later apps for both Android & IOS, Our apps will enable everyone to use EBUY from everywhere. Members of the EBUY platform can use this currency for buying and selling everything (new, used or etc) in EBUY App, and all while there are no intermediaries.

### **Why Invest in EBUY coin?**

Adopters and investors by Holding EBUY coin will get lots of advantages, including:

Holders receive a passive income for all EBUY transactions.

With the increase in the volume of transactions, amount burned is increased, leading to a total reduction of supply and eventually increases the worth of the EBUY coins.

### **Manual Burns**

Sometimes they burn some of the tokens. Sometimes they do not. Persistent burns on any of the protocols can be good in the early days, however, burns can by no means be precisely controlled.

The goal of EBUY is the automatic burning strategy that is beneficial and profitable for all.

In addition, the total number of EBUY tokens burned is on all explorer sites, which allows for greater transparency in identifying the supplies in circulation at any given time.

### **Manual Mint**

There is also problems with the manual mint. The first problem is that there is no control over it. Second, if they do it for themselves, no one will notice. This will hurt the adopters and investors, and no one will be held accountable.

With these interpretations, the EBUY team chose to design their tokens without mint.

## Automatic Liquidity Pool (LP)

Automatic LP is a function that acts as a beneficial implementation for holders and cause Increases support of the token price floor.

The goal here is to prevent the larger dips when whales decide to sell their tokens later in the game, which the automatic LP function makes the price fluctuate less.

## TOKENOMICS

EBUY has a total supply of 1 quadrillion tokens.

Right before launch on PancakeSwap we burned 30% of the tokens.

We kept 4.5% as a developer and marketing fund, and added remaining tokens in the liquidity pool and locked the LP tokens with DxLocker for 2 years.

### We designed our utility token to works as follows:

10% fee on every transaction:

3% are automatically burned, lowering the total supply.

2% distributed to all holders.

5% fee auto add to the liquidity pool.

### Owner

We will not renounce ownership right now as parts of the contract are to be slightly changed in the near future, therefore by doing this we do not neglect the future of the EBUY token.

## Road Map

### ●Q1 – 2021

- Ideation
- Team Formation
- Contract Creation
- Token launch
- Pancakeswap listed

### ●Q2 – 2021

- Website creation
- Community building
- Marketing
- Development
- CMC & GC listed

### ●Q3 – 2021

- DEXs listed
- Launch EBUY farming
- Development
- Beta launch
- Marketing campaign

### ●Q4 – 2021

- CEXs listed
- Partnerships
- Platform launch
- App Development
